SIMILARITY: Belongs to the intimin/invasin family.
CAUTION: Ref.2 sequence differs from that shown due to a frameshift in position 1315.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Last annotation update)

J. Callitate mating. Saccharomyces cerevisiae A and alpha cells express the complementary cell surface glycoproteins A-agglutinin and alpha-, respectively, which interact with one another to promote cellular aggregation during mating.

J. SUGGLIUMAR LOCATION: Attached to the membrane by a GPI-anchor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GO; GO:0000277; C:cell wall (sensu Fungi); IDA.

                                                                                                                                                                                                                                                                                                                                                                                                                                  Science 299:2071-2074(2003).
-!- FUNCTION: Hydrolyzes the cell wall of E.faecalis and
M.lysodeikticus. May play an important role in cell wall growth
and cell separation.
-!- SUBCELLULAR LOCATION: Secreted (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hydrolase; Glycosidase; Bacteriolytic enzyme; Cell wall;

The sequence of a nearly unclonable 22.8 kb segment on the left arm chromosome VI from Saccharomyces cerevisiae reveals ARO2, RPL5A,

The sequence of a nearly unclonable 22.8 kb segment on the left arm chromosome VI from Saccharomyces cerevisiae reveals ARO2, RPL5A,

The sequence of a nearly unclonable chain release factor that directs the termination of translation in response to the peptide chain termination codons UAA and UAG.

Lermination codons UAA and UAG.

Lermination codons UAA and UAG.

SUBCELLULAR LOCATION: Mitochondrial release factor family.
